Oklahoma

Georgia

Texas

Mid-Atlantic: North Carolina Virginia

Federal-State Market News Service United States Department of Agriculture Agriculture Marketing Service Fruit and Vegetable Division

PREFACE

This publication is a marketing summary of the 1993 United States peanut crop which is released by the United States Department of Agriculture, Federal-State Market News Service in Thomasville, Georgia.

Shipping point price information was summarized from weekly Peanut Market News reports. Other information was obtained from the National Agricultural Statistics Service, the Federal-State Inspection Service, the Agricultural Stabilization and Conservation Service, and the Foreign Agricultural Service.

We express our sincere appreciation to the government agencies mentioned above and also to the members of the industry for their cooperation and time, which made this summary possible.

Additional copies of this summary are available on request from the following address, at the cost of \$20.00 for each additional copy:

Federal-State Market News P.O. Box 1447 Thomasville, Georgla 31799 Phone: (912) 228-1208

World, Area, Yield And Production By Main Producers	23
Exports Of Peanuts and Peanut Oil From The United States 1990-1993	24-26

THE 1993 PEANUT CROP IN REVIEW

PRODUCTION: According to the United States Department of Agriculture, Agricultural Statistics Board, peanut production in crop year 1993 totaled 3.39 billion pounds, 21 percent below the 1992 crop and 31 percent below the record high 1991 crop. Planted area, at 1.73 million acres, was 3 percent above the 1992 level, while harvested area at 1.69 million acres was 1 percent above the 1992 acreage. The yield averaged 2,008 pounds per acre, 554 pounds below 1992 and 436 pounds below the 1991 crop.

Production in the Southeastern states (Alabama, Florida, Georgia, and South Carolina) totaled 2.08 billion pounds in 1993, down 22 percent from 1992. Planted area at 1.05 million acres was 4 percent above the 1992 level. Harvested acreage at 1.03 million acres was up 3 percent. Yields averaged 2,008 pounds per acre, 633 pounds below the 1992 level. Continued drought throughout much of the Southeast cut yields substantially.

Virginia and North Carolina production at 476 million pounds was 28 percent below 1992. The planted area at 247,000 acres was the same as 1992 but harvested area at 237,000 acres was 4 percent below the 1992 level. Yields averaged 2,008 pounds per acre in the Virginia-North Carolina region, 688 pounds below the 1992 level. The drought conditions were generally considered worse in this region than the Southeast and reduced yields and kernel size significantly.

Peanut production in the Southwest (New Mexico, Oklahoma, and Texas) was 840 million pounds, 14 percent below the 1992 crop. Planted area at 432,000 acres was up 1 percent from 1992, while the harvested area was down 1 percent. Yields averaged 2,007 pounds per acre, 291 pounds below the 1992 crop. Late season drought in Texas accounted for the greatest share of the decline in the Southwest.

PLANTING, GROWING, AND HARVESTING: As usual, planting of the nation's peanut crop first begins in the southwest. Planting in the Rio Grande Valley of Texas was noted in early April and followed a few weeks later in the South Texas counties of Atacosa, Frio, and Wilson. These plantings contain a small percentage of the nation's crop. The usual planting pattern continued with other production areas in Texas, Oklahoma, and New Mexico following in early May. Planting reached active levels by the middle of the month. The majority of the New Mexico crop was planted by early June. The Oklahoma and Texas crop was completed for the most part by the third week of June.

Growing conditions prior to harvest were favorable across the region during the early stages of the season but deteriorated in Texas. Excellent crops were produced in Oklahoma and New Mexico as favorable weather conditions were generally experienced. In Texas, a production shortfall was noted due primarily to reduced dryland yields where persistent dry weather lowered yield prospects and were cut further by early frost. Irrigated acreage produced good yields and matured in time to avoid frost injury. The initial harvest occurred in South Texas in early August. Harvesting in other Texas locations, Oklahoma, and New Mexico were not noted until late September. Industry sources estimated the overall harvest around one-third complete in late October. The New Mexico harvest was generally complete in mid November. Harvesting in Oklahoma and Texas was generally complete towards the end of the month. The overall harvest ran close to a month late compared to traditional schedules due to frequent periods of inclement weather.

Planting in the Southeastern states began in mid April but progressed slowly through the month due to excessive rainfall. Following the break in rainfall, dry weather conditions were experienced for the majority of May. At the end of the month, planting was complete in most areas of the production district. Growing conditions were mostly unfavorable during the months prior to harvest with the presence of mostly hot, dry weather. The dry weather reduced yields and production significantly. Harvesting started very slowly as several days of rain after Labor Day delayed digging and combining. Harvest activities reached significant levels around the third week of September. By the end of the month, the harvest surpassed the halfway point. The harvest was generally complete by the third week of October.

THE 1993 PEANUT CROP IN REVIEW CONTINUED

PLANTING, GROWING, AND HARVESTING (Continued) Very light planting in the Virginia-North Carolina Section began in early May. With the presence of favorable weather, planting proceeded rapidly and was generally complete by the end of the month. Growing conditions were mostly unfavorable during the months prior to harvest with the presence of mostly hot, dry weather. The unfavorable weather along with high soil temperatures and compaction lowered yields and production substantially. Harvesting began in a very light way in late September. Progress was slow until the second week of October. At the end of the month, the harvest was at or near the three-fourths completion mark. By mid November the harvest was basically complete.

MARKETING: The 1993 peanut crop average support price to growers for quota peanuts was \$674.93 per short ton, unchanged from the 1992 crop. Additional peanuts was \$131.09 per short ton, also unchanged from the 1992 crop.

In the Southeastern section, shipping point sales were transacted as early as December 1992 and continued on an irregular basis throughout the 1993 calendar year prior to harvest. Opening prices for prompt delivery (shipments with thirty days) at harvest time averaged 72 cents on Jumbo, 69 cents on Medium, 66 5/8 on No. 1 and 68 cents on U.S. Splits. The opening prices were the highest average prices for the crop year. The lowest price levels recorded averaged 63 cents on Jumbo, 57 1/2 cents on Medium, 55 1/2 cents on No. 1, and 57 cents on U.S. Splits.

In the Virginia-North Carolina section, preseason contract trading began as early as November 1992 and continued on an irregular basis throughout the 1993 calendar year prior to harvest. Opening prices for prompt delivery at harvest time on inshell peanuts averaged 80 cents on Jumbo and 77 1/4 cents on Fancy. Prices on shelled grades averaged 90 cents on Extra Large, 80 cents on medium, 71 cents on No. 1, and 68 1/2 cents on No. 2. The opening prices on shelled grades were the highest average prices for the crop year. The highest price levels on inshell peanuts averaged 81 cents on Jumbo and 78 1/4 cents on Fancy. The lowest price levels recorded averaged 74 cents on Jumbo, 52 cents on Fancy, 69 cents on Extra Large, 64 cents on Medium, 60 cents on No. 1, and 54 cents on No. 2.

In the Southwestern section preseason contract trading began as early as November 1992 on Spanish type and December 1992 on runner type. Preseason contract trading was noted on an irregular basis throughout the 1993 calendar year prior to harvest. Opening prices on Spanish type for prompt delivery at harvest time averaged 74 1/2 cents on Jumbo, 73 cents on No. 1, and 72 cents on U.S. Splits. The opening prices were the highest average prices for the crop year. The lowest price levels recorded averaged 69 cents on Jumbo, 67 cents on No. 1, and 59 1/2 cents on U.S. Splits. Spot runner prices for prompt delivery showed mostly the same price levels as Southeastern runners. The Valencia crop opened at an average of 60 1/2 cents in September reaching a high of 67 cents by March. The price level averaged 67 cents for the remainder of the season.

FOOTWOTES:

- 1/ Excludes stocks on farms. Includes stocks owned by or held for account of CCC in commercial storages. Farmer stock on net weight basis.
- 2/ Includes shelled edible grades, shelled oil stock, and shelled seed (untreated).
- 3/ Actual farmer stock, plus roasting stock, plus shelled peanuts X 1.33. 4/ Includes straight run oil stock peanuts.5/ Cleaned and unshelled.
- 6/ Excludes peanuts milled for seed.
- 7/ Relates to oil mills only.8/ All crushings regardless of grade.
- 10/ Formerly Titled "Salted Peanuts". Includes salted, unsalted, dry and honey roasted, salted and unsalted roasted.
- 11/ Includes peanut butter made by manufactuers for own use in candy.
- 12/ Includes peanut butter made by manufacturers for own use in cookies and sandwiches, but excludes peanut butter used in candy.
- 13/ Includes all shelled peanuts crushed regardless of grade.
- 14/ Includes peanuts re-packaged, roasted in shell, salted in shell, and raw in shell.
- 15/ Crushings by type not available.
- 18/ Includes peanuts milled for seed.
- 19/ Beginning in February 1988, shelled edible grades include blanched and shelled roasted peanuts converted to a raw basis using conversion factors of 1.08 and 1.12 respectively. This should be considered when comparing with previous year.

^{1/} Quality factors for 1988-93 crops are derived from the total of all certificates received and tabulated. This data has been prepared and summarized by the Kansas City Management Field Office from inspections reported by the Federal-State Inspection Service. Quality factors for 1984-87 crops are derived from sample data.

Source: USDA, Agricultural Stabilization and Conservation Service, Washington, D.C.

^{2/} FM, M and LSK are expressed as percentages of the gross weight of the peanuts. SMK, SS, DM, OK, and ELK are expressed as percentages of the total weight excluding FM and LSK.

^{3/} Extra Large Kernels, Virginia type shelled peanuts are included in the SMK. Virginia in-shell peanuts are expressed as a percentage of the total weight excluding FM and LSK.
